

In the summer of 2018, the first phase of construction will start on the Waterfront Sewer Forcemain Upgrade project. The project is part of the Waterfront Project 2018-2020, which will see a series of upgrades along the Highway 19A corridor between Rockland Road and Maritime Heritage Centre.

1. What is the project?

The project will see the installation of a new forcemain and lift stations between Lift Station No. 7 (Simm's Creek) and Maritime Heritage Centre, which will both replace aging infrastructure as well as expand capacity on the system to allow for projected growth in Campbell River. Repaving will be completed once the underground infrastructure is installed.

2. When is construction starting?

The first phase of the project, between Maritime Heritage Centre and 1st Avenue, will begin in July 2018 and run for up to four months. The second phase of the project, from 1st Avenue south to the Simms Creek facility, is scheduled for construction in 2020.

3. How much will this project cost?

The project costs for this first phase will be confirmed when construction works have been successfully tendered (mid-June).

4. Will traffic on the highway be impacted?

For construction in 2018, the contractor will aim to keep two-lanes of traffic open, although there will be intermittent periods of single-lane alternating closures. Inevitably though, traffic will slow during this period and drivers should allow a few more minutes to move through the construction zone safely. Using alternate routes is encouraged.

5. Where will the pipe run?

The new sewer pipe will be installed on the west side of the highway, until it reaches close to the Maritime Heritage Centre, where it will cross and connect on the east (water) side, at depths of between 1 to 3.5 metres (11.5 ft). Construction is expected to move from north-to-south along the route.

6. I live on the water side of the highway, downhill from the highway grade. Will I need a pump?

We understand this is a question that property owners in the area have. Design for future work is still underway and the project team will keep owners and residents informed of plans moving forward. In the meantime, there will be no disruptions/changes to service.

7. What will happen with the old pipe?

The existing sewer forcemain will remain operational until all installation and testing of the new system is complete. It will then be flushed, sealed and left in place.

8. Who's doing the work?

Engineers from Stantec Consulting are leading the design for the project. The tender for construction has been issued, and the contract is expected to be awarded by mid-June.

9. How can I learn more?

Information and updates are posted at the city's Capital Works webpage:
